BitSonic - A sort description about the project

Each Page:

- Was divided into a list of tokens.
- The tokens of the header were removed from the list.
- Bunches of tokens that were separated by 'Composition Total' (which marks 'End of Song') were grouped together.
- The remaining of the list tokens of the page was also unified to a single block.

Each Block:

- Contains lines and some song names and source names between them.
- Might change the current song we are specifying for each line at the resulting csv file (if contains a new song name in it).
- Might change the current source we are specifying for each line at the resulting csv file (if contains a new source in it).

Each Line:

- Is of one of 2 types: contains the 'PRODUCTION' token or doesn't contain it.
- **Contains 'Production':** of the form ['FLOAT', 'MONEY', 'FLOAT', 'INT', 'FLOAT', 'DATE', 'NAME', 'INT', 'NAME'].
- **Doesn't contain it:** of the form ['FLOAT', 'MONEY', 'FLOAT', 'INT', 'FLOAT', 'DATE', 'INT', 'NAME'].
